

What's New in the ABA Tracker

Version 4

A quick guide for therapists — how to pause, resume, and never lose your data.

Pause a session anytime

Need to stop in the middle — traveling to another location, a patient break, the bathroom, or you lost internet? Just pause. **Your data and your time are saved.**

- 1 Tap **Pause** at the top of the session.
- 2 Pick a reason if you want (optional).
- 3 Tap **Pause & Save**. You're done for now.

Resume where you left off

Your paused session waits for you — on **any device**. Start on your phone, finish on your tablet.

- 1 Go to the **client screen** after logging in.
- 2 Tap your **Paused session** card at the top.
- 3 Everything is exactly as you left it. Keep going!

Works without internet

No signal? Keep collecting data normally — the app saves everything on your device.

When you tap **Submit** with no connection, the session is safely stored and **sends itself automatically** the moment you're back online.

Your data is protected

The app **auto-saves every few seconds** while you work.

If your phone closes, dies, or refreshes, you'll see a **"Recovered"** card next time you log in so you can finish the session — nothing is lost.

Your session time stays accurate

Time spent paused (travel, breaks) is **not counted** in the session length. The recorded therapy time reflects the **actual time you spent with the client** — so your hours are always correct.

Good to know

- You can pause and resume **as many times as you need** in one session.
- If you're offline with a paused or not-yet-sent session, **don't log out** — the app will warn you, because logging out could lose it. Wait until you're back online.
- A green "synced" message means your paused session is safely on the server and available on other devices.
